LESSON 5 · CHEAT SHEET

Brain Image Analysis

A small MRI analysis, start to finish

PART A · TO VIEWABLE IMAGES

bash	Unpack all subjects	`bash scripts/unpack_dicoms.sh`
nano	Finish the conversion script	`nano scripts/convert_all_subjects_TEMPLATE.sh`
bash	Convert six subjects	`bash scripts/convert_all_subjects_TEMPLATE.sh`
bash	Check conversions	`bash scripts/check_conversions.sh`

PART B · MARK, MEASURE, COMPARE

ITK-SNAP	Open FLAIR, add MPRAGE, paint label 1	
save	One mask per subject	`lesion_masks/lesion_ROI_INITIALS_sub-PD01.nii.gz`
bash	Count marked voxels	`bash scripts/measure_lesion_masks.sh`
bash	Compare the two groups	`bash scripts/compare_groups.sh`

FROM YOUR PEER INSTRUCTOR

"We combine all the skills that we've been learning into neuroimaging."

— Tiffany Huang

IF YOU'RE STUCK

A control with nothing marked should measure 0. That is a valid result, not an error.
