TROUBLESHOOTING

Where Students Get Stuck

Each problem as it appears on screen, what it usually means, and how a peer instructor explains it

LESSON 1 · VIRTUAL HOUSE

```
cd: no such file or directory
```

You are in a different folder than you think, or the file already moved.

> "The first thing that I want you to check is if you're in the correct directory."

Chloe · House FAQ · 00:30

TRY `pwd` `ls`

LESSON 1 · VIRTUAL HOUSE

```
(the command doesn't work)
```

A typo, a capital letter, or an extra space.

> "Just make sure you type it out exactly or else it might not work."

Chloe · House video 1 · 01:52

TRY `ls` (copy the exact name)

LESSON 2 · WINE SHED

```
the wine is in the wrong basket
```

A file was moved to the wrong place.

> "...if we know where it is, then all we have to do is work backwards..."

Chloe · Wine FAQ · 00:00

TRY

```
mv
baskets_round1/cust_02/wine_03.txt
wine_shed_round1/
```

LESSON 2 · WINE SHED

```
mv into a .csv or .txt
```

The destination is a file, not a folder.

> "...those types of files only hold text and are not going to be able to hold full on files..."

Chloe · Wine FAQ · 01:22

TRY `ls baskets_round1`

LESSON 1 · VIRTUAL HOUSE

```
rm oven.txt
```

rm deletes for good; there is no trash can.

> "I just caution you to be careful when using this because there's no going back."

Chloe · House FAQ · 02:56

TRY `mv oven.txt trash/`

LESSON 3 · SCAN CONVERTER

```
dcm2niix: command not found
```

The tool, or something it depends on, is not installed.

> "In my case, I did not have Homebrew downloaded. So when I tried to run the command, I was very confused as to why it was not working."

Lindsey · NIfTI FAQ · 00:58

TRY `dcm2niix -h`

LESSON 3 · SCAN CONVERTER

```
(the script seems frozen)
```

Converting hundreds of DICOM files takes a few minutes.

> "So I would say to just be patient and let it load."

Lindsey · NIfTI FAQ · 02:02

TRY `wait, then Ctrl + C`

LESSON 4 · VIRTUAL LAUNDROMAT

```
No dirty clothes found
```

The files are not where the script is looking.

> "...no dirty clothes found usually means that the files are not what the script expects them."

Osiel · Laundry FAQ · 02:08

TRY `ls washer`
