LESSON	TASK	WHAT THE LEARNER PRODUCES	HOW THE LEARNER CHECKS IT

LESSON 1
Virtual House
Student run
Tiffany Huang's walkthrough
	Write and run a short script
	make_smoothie.sh, run with bash
		smoothie.txt
		`$ cat smoothie.txt`
		`Banana — one whole banana, sweet…`
		`Honey — a spoonful of honey…`
		`… one line per ingredient file`
			Read the combined file; confirm that every ingredient file contributed its line.

LESSON 2
Wine Shed
Clean run
matches Carlo Bayona's walkthrough
	Sort an order with a loop
	Round 2: cust_01 wants Red, cherry
		baskets_round2/cust_01/
		`$ bash scripts/check_baskets.sh round2`
		`cust_01: 2 wine(s)`
		`  - wine_01.txt`
		`  - wine_03.txt`
			Run the basket check, then read each wine and compare it with orders_round2.csv.

LESSON 3
Scan Converter
Schematic
file names from the lesson
	Convert scans with dcm2niix
	MPRAGE and FLAIR for sub-001
		NIfTI images and JSON sidecars
		`script_niftis/`
		`  sub-001_MPRAGE.nii.gz  sub-001_MPRAGE.json`
		`  sub-001_FLAIR.nii.gz  sub-001_FLAIR.json`
			Run the conversion check, then open each image and confirm the subject and scan type.

LESSON 4
Virtual Laundromat
Clean run
local simulation
	Submit a simulated cluster job
	Round 5, run on the learner's computer
		job log and clean_laundry/
		`$ cat remote_laundromat/logs/latest_job.log`
		`Remote cleaned remote_labcoat`
		`…`
		`Done. Remote cleaned 5 item(s).`
			Read the log, then compare the clean items with the files that were sent.

LESSON 5
Brain Image Analysis
Schematic
file names from the lesson
	Mark and measure images
	FLAIR scans for six teaching participants
		saved masks and a count table
		`lesion_masks/`
		`  lesion_ROI_INITIALS_sub-PD01.nii.gz`
		`results/lesion_voxel_counts.csv`
		`  label_1_voxels, status, mask_file`
			Open each mask over its own scan; confirm every status is ok before reading the group comparison.

Clean run: output from a fresh setup of the current game files. Student run: output shown in a contributor's recording. Schematic: file names from the lesson instructions, not a recorded run. Lesson 4 runs entirely on the learner's computer and connects to no real server. Lesson 5 counts describe the learner's markings of lesion-like regions, not confirmed pathology.
