LESSON 2 · BY HAND, THEN BY SCRIPT

Sorting Files in 5 Steps

The same sorting job is done twice: one bottle at a time, then with a loop

THE JOB

Fill each customer's basket with the wines that match their order's color and flavor

ROUND 1 · BY HAND

Read the orders

`cat` `ls`

Know what each customer wants

→

```
[lindseyko@dhcp-vl2041-36914 WineGame % cat orders_round1.csv
customer_id,color,flavor
cust_01,Red,cherry
cust_02,White,citrus
cust_03,Rose,strawberry
[lindseyko@dhcp-vl2041-36914 WineGame % ls wine_shed_round1
wine_01.txt     wine_02.txt     wine_03.txt     wine_04.txt     wine_05.txt     wine_06.txt
```

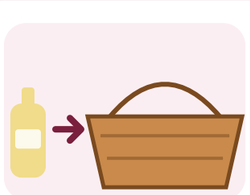

Inspect a bottle

`cat`

Check its color and flavors

→

```
[lindseyko@dhcp-vl2041-36914 wine_shed_round1 % cat wine_03.txt
color: White
flavors: citrus,apple
price: 16
```

Move it to a basket

`mv`

One command per bottle

→

```
[lindseyko@dhcp-vl2041-36914 WineGame % mv wine_shed_round1/wine_03.txt baskets_round1/cust_02/
[lindseyko@dhcp-vl2041-36914 WineGame % mv wine_shed_round1/wine_04.txt baskets_round1/cust_02/
[lindseyko@dhcp-vl2041-36914 WineGame % mv wine_shed_round1/wine_05.txt baskets_round1/cust_03/
[lindseyko@dhcp-vl2041-36914 WineGame % mv wine_shed_round1/wine_06.txt baskets_round1/cust_03/
```

ROUND 2 · WITH A SCRIPT

Write the rule once

`for` `if` `grep`

Loop over every bottle; move the matches

→

```
# Step 1: loop through each wine file in the shed.
for wine_file in "$SHED"/*.txt; do
  echo "Checking $wine_file"

  # Step 2: write an if statement that checks color.
   if grep -q "^color: $COLOR$" "$wine_file"; then

    # Step 3: inside the color check, write another if statement that checks flavor.
     if grep -q "flavors: .*$FLAVOR" "$wine_file"; then

      # Step 4: move the matching wine into the basket.
       mv "$wine_file" "$BASKET/"

     fi
   fi
done
```

Run it and check

`bash`

Both matching bottles land in cust_01

→

```
[lindseyko@dhcp-vl2041-36914 WineGame % bash scripts/check_baskets.sh round2
Basket check for baskets_round2
cust_01: 2 wine(s)
  - wine_01.txt
  - wine_03.txt
```
