LESSON 2

The Wine Shed

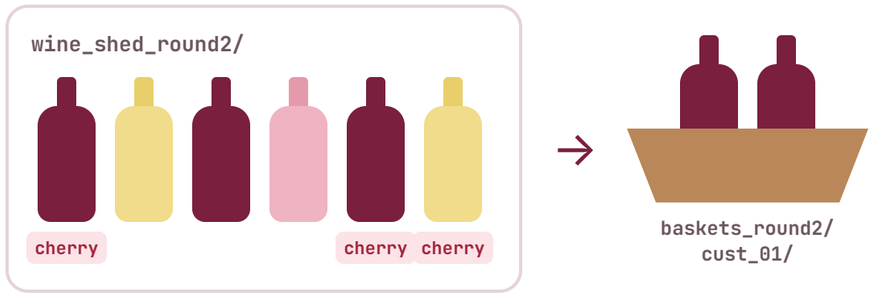

Learning Bash Scripting by Sorting a Wine Shed

COMMANDS UNLOCKED

`mv` `grep` `read` `if` `for` `$VARIABLES` `bash` `.sh`

ORDER · cust_01

Every Red wine that mentions cherry

Red **and** cherry → basket. Anything else stays in the shed.

HOW THE ROUNDS RAMP UP

ROUND 1	ROUND 2	LATER
Sort by hand	One script	Scale it up

1 Turn the order into variables

round2_sort_one_customer.sh

```
CUSTOMER="cust_01"
COLOR="Red"
FLAVOR="cherry"
SHED="wine_shed_round2"
BASKET="baskets_round2/$CUSTOMER"
```

2 Loop through the shed, check, move

round2_sort_one_customer.sh

```
# Step 1: loop through each wine file in the shed.
for wine_file in "$SHED"/*.txt; do
  echo "Checking $wine_file"

  # Step 2: write an if statement that checks color.
  # Hint:
  # if grep -q "^color: $COLOR$" "$wine_file"; then

    # Step 3: inside the color check, write another if statement that checks flavor.
    # Hint:
    # if grep -q "flavors: .*$FLAVOR" "$wine_file"; then

      # Step 4: move the matching wine into the basket.
      # Hint:
      # mv "$wine_file" "$BASKET/"

    # fi
```
