LESSON 4

The Virtual Laundromat

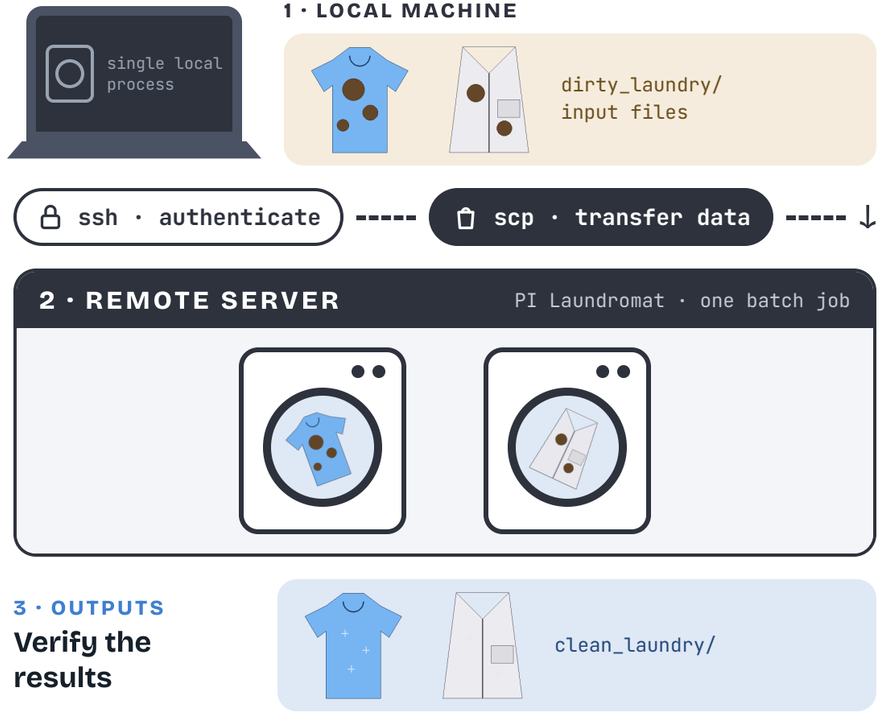

Learning Remote Computing in a Virtual Laundromat

CONCEPTS INTRODUCED

`mv` `for` `ssh` `scp` `batch jobs` `logs`

Local versus remote processing

Large MRI analyses run on servers and clusters, not laptops.

1 Inspect a large input batch (11 files)

```
dirty_laundry/round2_big_load
yoaskiiglesias@Air-de-Osiel LaundryGame2 % cd dirty_laundry/round2_big_load
yoaskiiglesias@Air-de-Osiel round2_big_load % ls
labcoat_dirty.png       shirt_2_dirty.png       socks_1_dirty.png       socks_dirty.png
pants_dirty.png         shirt_3_dirty.png       socks_2_dirty.png       towel_dirty.png
shirt_1_dirty.png       shirt_dirty.png         socks_3_dirty.png
```

2 Authenticate to the remote server (simulated ssh)

```
LaundryGame2
yoaskiiglesias@Air-de-Osiel LaundryGame2 % bash scripts/fake_ssh.sh
Connecting to ...
Password:
Login failed.
Hint: ask your instructor for the laundry password.
```

3 Verify the processed outputs

```
clean_laundry
yoaskiiglesias@Air-de-Osiel clean_laundry % ls
pants_clean.png shirt_clean.png socks_clean.png
```
