STUDENT REFLECTIONS

How to Explain Your Learning

Answer each question with something you can point to from your own work.

1 What I learned

What did this game teach you how to do?

YOU MIGHT SHOW · A COMMAND YOU CAN NOW USE

```
Learning-Unix-Basics-in-a-Virtual-House % mv
Decoration/bed.txt House/Bedroom/
```

Say the skill in one sentence: “I can move a file into another folder from Terminal.”

2 Where I got stuck

What was one moment where you got stuck, confused, or had to slow down?

YOU MIGHT SHOW · AN ERROR MESSAGE

```
House % cd Kitchen
cd: no such file or directory: Kitchen
```

Then say what you checked next, such as `pwd` or `ls`.

3 What mattered

What command, file, or folder felt most important in this game?

YOU MIGHT SHOW · A FOLDER

```
lesion_masks/lesion_ROI_INITIALS_sub-PD01.nii.gz
```

Explain why it mattered: every saved mask had to be here, named with its subject ID.

4 Connection to research

How do you think this game might help you with real research or MRI work?

YOU MIGHT SHOW · A RESEARCH TASK

Converting every participant’s scans the same way, so a lab can compare them.

Connect one step from the game to a step in an MRI study.

5 What I would try next

What would you do first if you had to solve a similar problem on your own?

YOU MIGHT SHOW · A NEXT STEP

```
pwd
ls
cat README.txt
```

Describe the first checks you would make before changing any files.

Show your process, not a perfect answer. These are examples of what to show, not answers to copy. Remove personal information from anything on screen.
